..... Millions of people enjoy reading them. These help them to keep up with politics, and are a good source of entertainment and knowledge.

..... It is one of the most important substances we use today. We use it to make petrol and other fuels (carburant). It is also important for making produces such as plastics and chemicals.

SPAIN..... A country in southern Europe with a varied landscape and climate. The high central plain (plaine) of the Meseta is dry, with cold winters and hot summers.

..... They are strong buildings that were specially designed to protect the people who lived in them from attack.

..... One of the nine planets that travel around the Sun in our Solar System. It is a rocky ball whose surface is two thirds water and one third land.

..... They are the fastest and most efficient kind of land transport. They can carry up to 800 passengers at speeds of nearly 300 kilometres per hour.

..... The Earth, the Universe and everything in it is made up of them. It is a basic substance made of just one kind of atom. It cannot be split up into different materials.

..... It is a country in north-west Europe. It is often called the “Emerald Isle” (=green island), because grass grows lush (luxuriant) and green in the mild, moist (humide) climate.

..... It is caused when we do damage to our surroundings (environnement). Litter is one form of it. But chemicals and waste (déchets) from factories, farms, motor cars and even houses cause much more serious problems.

..... They are different from insects. They have eight legs, and their bodies are divided into two main parts. They live by catching small prey (proie) in their webs.

..... It includes everything that exists – from the Earth to the most distant parts of space. The distances are so vast that it takes billions of years for light to reach us from the edges of it.

..... They are rodents like rats, squirrels and beavers. A “rodent” means gnawing (ronger) animal. They live all over the world. Some live in deserts, others in rainforests.
